the combined observational power of the multiple earth observing satellites is currently not being harnessed holistically to produce more durable societal benefits we are not able to take complete advantage of the prolific amount of scientific output and remote sensing data that are emerging rapidly from satellite missions and convert them quickly into decision making products for users the current application framework we have appears to be an analog one lacking the absorption bandwidth required to handle scientific research and the voluminous petabyte scale satellite data this book will tackle this question how do we change this course and take full advantage of satellite observational capability for a more sustainable happier and safer future in the coming decades

natural and human induced changes in earth s interior land surface biosphere atmosphere and oceans affect all aspects of life understanding these changes requires a range of observations acquired from land sea air and space based platforms to assist nasa noaa and usgs in developing these tools the nrc was asked to carry out a decadal strategy survey of earth science and applications from space that would develop the key scientific questions on which to focus earth and environmental observations in the period 2005 2015 and beyond and present a prioritized list of space programs missions and supporting activities to address these questions this report presents a vision for the earth science program an analysis of the existing earth observing system and recommendations to help restore its capabilities an assessment of and recommendations for new observations and missions for the next decade an examination of and recommendations for effective application of those observations and an analysis of how best to sustain that observation and applications system
