the rapid deployment of renewable energy systems in the grid is reshaping the energy structure and significantly impacting the operational stability and reliability of power systems renewable energies such as solar and wind pose significant challenges to the continuity and stability of power supply due to their variability and intermittency to address these challenges uncertainty analysis and optimization offer effective strategies to manage the uncertainties of renewable energy thereby enhancing the resilience and stability of power systems traditional model based approaches while effective will ultimately struggle to handle the ever growing scale and various uncertainties of energy systems the development of machine learning and data science has played a significant role in overcoming the difficulties data driven approaches freed from the limitations of traditional models effectively complement model driven uncertainty optimization methods they demonstrate great potential in uncertainty analysis operation and optimization of power systems the purpose of this research topic is to conduct uncertainty optimization planning and analysis of renewable energy power systems and investigate the application of data driven methods in the uncertainty optimization of renewable energy power systems this will ensure the secure reliable and efficient operation of power systems we hope that this research topic will encompass the latest technologies in advanced data driven uncertainty optimization methods for the planning operation and analysis of renewable energy power systems promoting the development of renewable energy power systems towards greater intelligence efficiency and reliability this research topic encourages the contributions of original research articles with new data information and findings and comprehensive reviews on the advanced data driven uncertainty optimization method for planning operation and analysis of renewable power systems and other relevant topics topics of interest for publication include but are not limited to 1 advanced optimization methods for renewable energy power system planning 2 uncertainty optimization techniques for the operation of

what is operations management every business is managed through three major functions finance marketing and operations management illustrates this by showing that the vice presidents of each of these functions report directly to the president or ceo of the company other business functions such as accounting purchasing human resources and engineering support these three major functions finance is the function responsible for managing cash flow current assets and capital investments marketing is responsible for sales generating customer demand and understanding customer wants and needs most of us have some idea of what finance and marketing are about but what does operations management do operations management om is the business function that plans organizes coordinates and controls the resources needed to produce a company's goods and services operations management is a management function it involves managing people equipment technology information and many other resources operations management is the central core function of every company this is true whether the company is large or small provides a physical good or a service is for profit or not for profit every company has an operations management function actually all the other organizational functions are there primarily to support the operations function without operations there would be no goods or services to sell consider a retailer such as the gap which sells casual apparel the marketing function provides promotions for the merchandise and the finance function provides the needed capital it is the operations function however that plans and coordinates all the resources needed to design produce and deliver the merchandise to the various retail locations without operations there would be no goods or services to sell to customers
